

August 2011

I began chiropractic treatment at 47 years old due to disintegrating discs in my neck. In the past 13 years, on several occasions, I decided to stop treatments as I felt fine. After a few months of “feeling fine” my neck would seize up and I would return to a regular treatment program.

I choose Dr. Moyer because of the practices he uses; Pro-Arthrostim for treatments, which I prefer to manual adjustments. Within the first month I noticed my knees were no longer stiff when I stepped out of the car.

Throughout the previous 4 years I have experienced several acute incidents that Dr. Moyer has helped me through and has returned me to pain-free healthy living. The last incident was Bell’s Palsy which is a virus and paralyses half of your face and can be permanent. My G.P. had given me prescriptions for an anti-viral drug and steroids. Neither drug had any effect. After seeing Dr. Moyer for several adjustments, my face looked almost normal and within several more, there was no trace of palsy in my face.
